Space Duel™

X-Axis Output

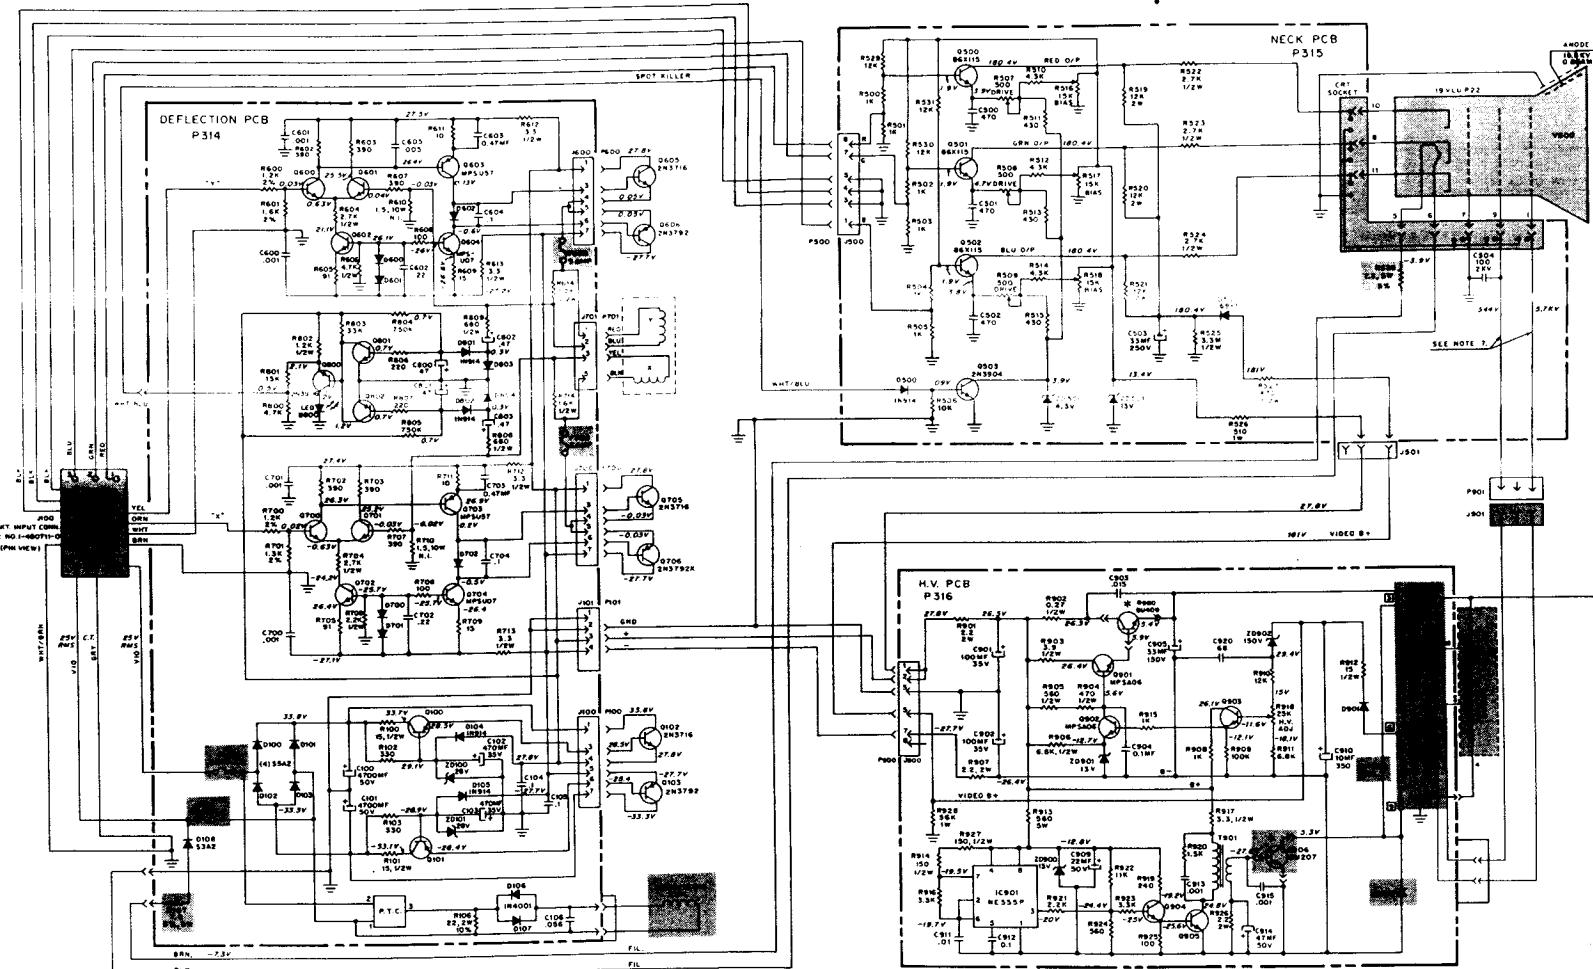

If you replace the Space Duet™ main PCB or the display, you may have to make the following adjustments:

1. Enter self-test and advance screen to diagonal crosshatch pattern.
2. **Centering Pots:** Adjust **XCTR (R109)** and **YCTR (R113)** so that the crosshatch pattern is located at the middle of the screen.
3. **Size Pots:** Adjust **XSIZE (R190)** and **YSIZE (R214)** so that the crosshatch pattern actually covers the whole visible screen.
4. **Bipolar Pots:** Adjust the **XBIP (R100)** and **YBIP (R200)** so that the corners of the diagonal lines rest exactly on the sides of the outer rectangle.
5. **Linearity Pots:** Adjust **XLINEAR (R104)** and **YLINEAR (R105)** so that the displayed picture on the screen is straight. A line must be drawn across the screen to inspect the displayed picture on the screen. It is necessary to reposition the **SIZE** pots in order to get the correct adjustment.

NOTICE TO ALL PERSONS RECEIVING THIS DRAWING
CONFIDENTIAL - Receiving this drawing without the spe-
cified written agreement, or the signature of the re-
cipient, is illegal. This drawing is only conditionally issued, and neither receipt nor
possession thereof conveys or transfers any right in, or
li-
cense to, the drawing or any part thereof, or to any other
technical information shown therein, nor any right
to reproduce the drawing or any part thereof. Except for
the individual named on the drawing, no other person
is authorized to use the drawing or any part thereof.
Unauthorized users, unless a written agreement is signed
to reproduce this drawing or the subject matter thereof, or
to an oral agreement with or written permission from
the originator, are liable for damages resulting from
any unauthorized use.

Space Duel™

Color X-Y Display Schematic Diagram

GENERAL NOTES

1. Resistance values in ohms, $\pm 1\%$, watt, $\pm 5\%$, unless otherwise noted. $K = 1,000$, $M = 1,000,000$
2. Capacitance value of 1 or less is in microFarads, above 1 in picofarads, unless otherwise noted.
3. *Q900 and Q906 are not in High-Voltage PCB.
4. All D.C. voltages are $\pm 10\%$ measured from point indicated to ground, using a high-impedance meter. Voltages are measured with no signal input and controls are in a normal operating position.
5. Circled numbers indicate location of waveform reading.
6. ZD100-101 uses (66X040-007) zener diode in series with (340X231-934) 330-ohm resistor in early production models.
7. Use a 1,000-1 probe when measuring G2 (screen) or focus voltage.

! WARNING !

Components identified by shading have special characteristics important to safety and should be replaced only with identical types.

Troubleshooting with the Read/Write Controller

A. CAT Box Preliminary Set-up

1. Remove:

- The electrical power from the game.
- The wiring harness from the game PCB.
- The game PCB from the game cabinet.
- The microprocessor chip C2 from the game PCB.

2. Connect:

- The harness from the game to the game board. (Use extender cables if available.)
- #0 and #2 test points together with the shortest possible jumper.
- WDDIS test point to ground.
- The CAT Box flex cable to the game PCB test edge connector.

3. Power Up:

- The game.
- The CAT Box.

4. Set CAT Box Switches:

- TESTER SELF-TEST: (OFF)
- TESTER MODE: R/W
- Press TESTER RESET

B. Address and Data Lines

- Perform the CAT Box preliminary set-up.
- Connect the DATA PROBE to the CAT Box and the game ground test point.
- TESTER MODE: R/W
- BYTES: 1
- PULSE MODE: UNLATCHED
- R/W MODE: (OFF)
- R/W: WRITE
- Key in address pattern on the keyboard (use AAAA to start)
- Push DATA SET
- Key in data pattern on the keyboard (use AA to start)
- R/W MODE: STATIC
- Probe the IC-pin with the data probe and check for the 1 or 0 LED as indicated in Table 2-2. Repeat this step for each address and data line.
- Repeat steps 6-12 using 5555 in step 7 and 55 in step 9.

Table 2-2 Address and Data Lines

When writing AAAA pattern	Address and data lines	When writing 5555 pattern
Logic State	IC-Pin	Logic State
1	R2-12	0
0	R2-13	1
1	R2-14	0
0	R2-15	1
1	B1-7	0
0	B1-12	1
1	B1-14	0
0	B1-16	1
1	C1-9	0
0	C1-7	1
1	C1-5	0
0	C1-3	1
1	C1-12	0
0	C1-14	1
1	C1-16	0
0	C1-18	1
1	F2-9	0
0	F2-8	1
1	F2-7	0
0	F2-6	1
1	F2-5	0
0	F2-4	1
1	F2-3	0
0	F2-2	1

C. RAM

- Perform the CAT Box preliminary set-up.
- Set the CAT Box switches as follows:
 - Press TESTER RESET
 - DBUS SOURCE: ADDR
 - BYTES: 1024
 - R/W MODE: (OFF)
 - R/W: WRITE
 - Enter 0000 on the keypad
 - Toggle R/W MODE to PULSE and back to (OFF)
 - R/W: READ
 - Toggle R/W MODE to PULSE and back to (OFF)
- If the CAT Box reads an address that doesn't compare, the COMPARE ERROR LED lights up, the ADDRESS/SIGNATURE display shows the failing address location, and the ERROR DATA DISPLAY switch is enabled. Using this switch, determine if the error is in the high-or low-order RAM.
- Repeat the test with DBUS SOURCE set to ADDR.
- Repeat steps 2-4, entering 2000 on the keypad (step f).
- Repeat steps 2-4, entering 2400 on the keypad (step f).

D. Option Switch Inputs

- Perform the CAT Box preliminary set-up.
- BYTES: 1
- R/W: WRITE
- R/W MODE: (OFF)
- Key in 100F
- Push DATA SET
- Key in 00
- R/W: READ
- R/W MODE: (OFF)
- Key in 100B
- R/W MODE: STATIC, then to (OFF)
- R/W: READ
- Key in 1008
- R/W MODE: STATIC
- Activate each option switch toggle at location D4 while monitoring the DATA display. The DATA display will change if the switches are operating properly.
- Repeat steps 3-15, entering 140B in step 5 and 1408 in step 10, and activate switches at location B4.

E. Custom Audio I/O Chips

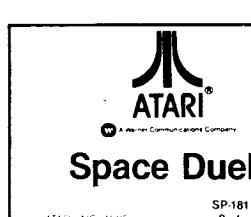

NOTE

Space Duel™ has two custom audio I/O chips. Each must be tested separately. There are several ways to test the chips:

- Perform the self-test.
- Substitute good part for defective part.
- Use the procedure that follows.

- Perform the CAT Box preliminary set-up.
- BYTES: 1
- R/W: WRITE
- R/W MODE: (OFF)
- Enter address from Table 2-3
- Press DATA SET
- Enter the data from Table 2-3
- R/W MODE to PULSE and back to (OFF)
- Repeat steps 5-8 for each address and data, and note the test results.

NOTICE TO ALL PERSONS RECEIVING THIS DRAWING
CONFIDENTIAL. Reproduction forbidden without spe-
cial permission. thereof. Contains trade secrets and
is the property of Atari, Inc. It is to be held in
confidence and is not to be copied, reproduced
or distributed outside the company. It is to be
used only for the purpose for which it was
supplied. It is to be returned to the company
upon request. It is to be destroyed when no longer
needed. It is to be handled with care and
kept in a safe place.

Troubleshooting with Signature Analysis

A. Signature Analysis Set-up

1. Perform the CAT Box preliminary set-up.
2. Connect the three BNC to E-Z clip cables (supplied with the CAT Box) to the SIGNATURE ANALYSIS CONTROL START, STOP and CLOCK jacks on the CAT Box.
3. Attach the three black E-Z clips to a ground loop on the Space Duel™ game PCB.
4. Attach the CAT Box data probe to the DATA jack on the CAT Box.
5. The colored E-Z clips on the cables will be moved about for each group of signatures to be taken.
6. Set the CAT Box switches as follows:
 - TESTER MODE: SIG
 - TESTER SELF-TEST: OFF
 - PULSE MODE: LATCHED
 - START: As indicated
 - STOP: As indicated
 - CLOCK: As indicated
7. Power up the game board and the CAT Box.

B. Address Lines

1. CAT Box Settings for Address Bus Test

Probe	Trigger	IC-Pin	Test Pt.
Start	✓	R2-12	
Stop	✓	R2-12	
Clock	✓	C2-39	Φ2

Verify CAT Box settings and connections as follows:

- probe GND test point = 0000 signature
- probe +5V test point = 0001 signature

2. Signatures

Logic Probe on IC-Pin	Signal Name	Signature Should Be
C1-18	AB0	UUUU
C1-16	AB1	5555
C1-14	AB2	CCCC
C1-12	AB3	7F7F
C1-3	AB4	5H21
C1-5	AB5	0AFA
C1-7	AB6	UPFH
C1-9	AB7	52F8
B1-16	AB8	HC89
B1-14	AB9	2H70
B1-12	AB10	HPP0
B1-7	AB11	1293
B1-5	AB12	HAP7
R2-14	A13	3C96
R2-13	A14	3827
R2-12	A15	755U

C. Address Decoder

CAUTION

While testing decoders and ROMs, it may be necessary to add 270 pF capacitor to ADDR 12, 13, 14 and 15 to eliminate unstable signatures.

1. CAT Box Settings for Address Decoder Test

Probe	Trigger	IC-Pin	Test Pt.
Start	✓	R2-12	
Stop	✓	R2-12	
Clock	✓		Φ2

2. Signatures

Verify CAT Box settings and connections as follows:

- probe GND test point = 0000 signature
- probe +5V test point = 0001 signature

Jumper WRITE, K4-6, to GND test point.

Logic Probe on IC-Pin	Signal Name	Signature Should Be
M5-8	OUTPUT	5AAC
L4-1	VGGO	C9FU
L4-2	WDCLR	258A
L4-3		4C6C
L4-4	VGRST	7079
L4-5	INTACK	F425
L4-6	EAROMCON	6175
L4-7	EAROMWR	HAU2

Watchdog

The Watchdog circuit will send continuous reset pulses to the microprocessor if a problem exists within the microprocessor circuit. If the self-test fails to run, it is a good practice to check the reset line.

RESET is a microprocessor input (pin 40). In a properly operating game, reset should occur during power-up or when the reset pushbutton is activated. A pulsing RESET line indicates that something is causing the microprocessor to lose its place within its program. Typical causes are:

1. Open or shorted address or data bus lines
2. Bad microprocessor chip
3. Bad bus buffers
4. Bad ROM
5. Bad RAM
6. Any bad input or output that causes an address or data line to be held in a constant high or low state

A pulsing RESET signal indicates a problem exists somewhere within the microprocessor circuitry rather than within the Analog Vector-Generator.

D. ROM and Data Lines

We are providing only the signatures for ROM4. This ROM contains the self-test procedure that tests all the other ROMs and displays a number representing a ROM failure.

NOTE

When taking signatures of ROM4, install 270 pF capacitors between IC R2, pin 12 and ground and IC R2, pin 14 and ground.

1. CAT Box Settings for ROM4 Test (I.C. J1 for ROM part no. 136006-201)

Probe	Trigger	Test Pt.
Start	✓	ROM4
Stop	✓	ROM4
Clock	✓	Φ2

Verify CAT Box settings and connections as follows:

- probe GND test point = 0000 signature
- probe +5V test point = 755U signature

2. Signatures

Logic Probe on IC-Pin	Signal Name	Signature Should Be
K6-12	SINP1	U14U
K6-11	SINP2	HF1A
K6-10	EAROMRD	1'0HA
P3-1	RAM0	51FP
K6-12	RAM1	6C23
		Φ87H
K6-11		5AAC
K6-10		C787
P3-4		9UAP
P3-5	IO0	2828
P3-6	IO1	
R3-11	IOS	

Remove jumper between R/W test point and +5V test point.

NOTE

If you are taking signatures on a PCB connected to a game, disconnect the connector to the coin counter(s). The coin counter will energize while K4-6 is connected to ground.

NOTICE TO ALL PERSONS RECEIVING THIS DRAWING
